

Blueprint, SCS and RTP

RTP, SCS and Blueprint

- RTP is a transportation visionary program for Fresno County for the next 25 years; it contains a land use element that is required to be based on local general plans.
- In the land use element, an SCS will need to be developed to demonstrate that combined with transportation measures, the future growth in the region will be able to meet the target of greenhouse gas reduction.
- Blueprint is a land use vision for 2050. The SCS(es) are incremental steps towards achieving Blueprint's goal.
